

Dataset Description: Global Sustainability Performance Dataset

This dataset contains information about global products and their performance in terms of **sustainability and environmental impact**.

It measures how eco-friendly each product is through several key indicators, including:

- **Carbon Footprint** 🌫️ — Measures the total greenhouse gas emissions.
- **Water Usage** 💧 — Tracks the amount of water consumed in production.
- **Waste Production** ♻️ — Indicates the level of waste generated.
- **Eco-friendly Manufacturing** — Assesses the company's adherence to green production practices.
- **Recycling Programs** — Evaluates the presence and effectiveness of recycling initiatives.
- **Price, Brand, and Material Type** — Provide contextual product details.

Data Structure

- **Rows:** Approximately 1,000 (each representing a product)
- **Columns:** Around 10 (each representing a feature or performance metric)

Key Performance Indicators (KPIs)

The analysis focused on the following sustainability metrics:

- **Sustainability Rating** → Overall environmental sustainability score of each product.
- **Carbon Footprint Reduction %** → Percentage of carbon emission reduction.
- **Water Efficiency** → Efficiency of water consumption during production.
- **Waste Reduction %** → Percentage of waste reduction achieved.
- **Eco Manufacturing Index** → Degree of compliance with eco-friendly manufacturing standards.
